

About DHA Filter

For 30 years, DHA Filter is an innovative leader in the filtration industry with a strong presence in the manufacturing sector. We are a results-driven company committed to providing filtration solutions by combining our vast technical expertise, first class customer support, and short response times.

At DHA Filter, Environment, Health, and Safety play an important role in our everyday activities. We take great pride in operating a clean and safe manufacturing and distribution center.

OEMs have come to rely on DHA Filter to solve their filtration issues. DHA Filter offers customized solutions tailored to OEMs across a wide range of industries. Our mission: Offer a diversified, innovative filtration product line that builds customer satisfaction and trust.

Industries Served

DHA Filter is a manufacturer and global supplier of industrial filtration products and service to the general industrial sector. We place an emphasis on Liquid Filtration and Dust/Mist/Smoke containment.

With a customer base that spans 44 states and several countries, we follow a proven approach for hard cost savings, productivity savings, and process improvements. We also supply our customers with unrivaled expertise in filtration management and service.

Manufacturing

DHA Filter has two manufacturing operations located in Jacksonville, FL and Watertown, TN. We specialize in a wide range of manufacturing processes including pleating, slitting & rewinding, die cutting, plastic injection molding, urethane dispensing and assembly. All of which fully support our various filter programs covering many different industries and OEM's.

Combined with our engineer design team and flexible manufacturing, we have the ability to quickly turn out new filter designs to meet new opportunities or OEM expectations.

Customer Service

Taking care of the customer is our number one goal! We understand time is valuable and more importantly preventing production downtime at all costs. Whether it's your dedicated account rep, or an inside CSR, responding to inquiries and emergencies in a expeditious manner is our main focus.

DHA Filter is your one stop source for high quality industrial filtration products!

Dust Collector Maintenance Services

Regular inspections and preventative maintenance are an important part of keeping your dust collection system operating at peak efficiency and in compliance with industry standards and regulations. DHA Mechanical provides an extensive range of dust collector services and would be happy to customize a regular maintenance plan to meet your company's specific needs and budget.

Preventative Maintenance:

- System Inspection
- System Balancing and Analysis
- Filter Cartridge Change Outs
- Solenoid and Diaphragm Valve Repair
- Motor Inspections, Lubrication, Maintenance
- Ductwork Inspections
- Reporting

Preventative Maintenance For Various Reasons:

- Employee health exposure
- Loss of productivity
- Predictive maintenance
- ISO 9001 Reliability of Key Equipment
- Environmental Regulations

Dust Cartridge Changeout Services

DHA Mechanical provides professional filter change out services on all collector brands and sizes. With planned routine filter service, your equipment will operate with peak dust collection efficiency and reduced emissions.

Regularly scheduled service is essential to maintain and prolong the life of your dust collection system, while conforming to environmental and safety regulations. Make sure your facility has a clean and safe work environment to protect your staff and uphold EH&S guidelines.

Service begins with an initial inspection of your system to evaluate the frequency of cartridge changeouts required. As part of this analysis, we'll take into consideration all the variables including the size and type of dust collector, type of particulate matter being collected, air flow, temperature, moisture, contaminants, and other factors to determine the proper cartridge type best suited for your application.

Dust collector cartridge changeouts can be performed alone on a predetermined schedule or as part of a more comprehensive preventative maintenance program. Emergency service is also available. With over 10 years of experience in the field, DHA Mechanical has the expertise you can depend on for safe, timely and efficient filter changeouts.

Change-Out Procedure:

- Lock out / Tag out
- Inspection
- Remove old cartridges; bag, box, and dispose in provided dumpster
- Replace door gaskets (Recommended annually)
- Install new cartridges
- Finish with good housekeeping
- Detailed report for ISO documentation
- Work performed by trained professionals
- Planned outages and emergency response

Repair & Replacement Parts

Over the years, the efficiency and effectiveness of your dust collection system can change. Worn mechanical parts, faulty cleaning components like diaphragms and solenoid valves, worn out door seals, and misaligned yokes, are some of the necessary upkeep required to keep your dust collection system optimized for maximum performance. DHA Mechanical has trained technicians who can do just that.

Goyen Header Tank Systems

Complete and fully certified header tank systems specifically engineered for dust collector filter cleaning. Full immersion system with optimized flow rate for the best cleaning results on the market.

Goyen Pulse Jet Valves

Goyen high-performance flanged valves for reverse pulse jet systems in dust collectors. They are used around the world to frequently clean the filters in systems aiming to control the dispersion of noxious substances, improve indoor air quality in workplaces, or prevent harmful dust emissions.

Goyen Diaphragm Repair Kits

Goyen Valve repair kits for any size or configuration Goyen valve. All kits are genuine Goyen spare parts and are shipped new from the US warehouse. Diaphragm kits typically contain the replacement diaphragm, the spring, O-ring seal.

Goyen Solenoid Valves

Goyen solenoid pilot valves are specifically designed for the reverse pulse jet filter cleaning of dust collectors.

Collector Doors & Gaskets

OEM doors to fit Torit Donaldson and Sulzer Metco dust collectors. Door gasket kits available to keep your collectors sealed up tight.

Sensocon Differential Pressure Gauges

Digital differential pressure gauges and controls are the natural evolution from mechanical differential pressure gauges and are now being used to replace this older technology. Digital differential pressure gauges and controls take advantage of the technology available to offer more features, better performance and in general a more accurate and complete product compared to mechanical differential pressure gauges.

□ Products

- Gas Turbine Cartridges
 - Oil Mist Filters
- Nonwoven Filter Media
 - Pleated Filter Bags
 - Laser Filters
 - Process Filtration
 - Hydraulic Filters
- Compressor Filters
 - HVAC Filters
- Paint Booth Filters
 - Baghouse Filters
 - Equipment
- Dust Cartridge Filters
